

Patient Safety Indicator 14 (PSI 14) Postoperative Wound Dehiscence Rate

July 2016

Provider-Level Indicator

Type of Score: Rate

Prepared by:

Agency for Healthcare Research and Quality

DESCRIPTION

Postoperative reclosures of the abdominal wall per 1,000 abdominopelvic surgery discharges for patients ages 18 years and older. Excludes cases in which the abdominal wall reclosure occurs on or before the day of the first abdominopelvic surgery, cases with an immunocompromised state, cases with stays less than two (2) days, and obstetric cases. In ICD-10-CM, cases are included if they have a diagnosis code of disruption of internal surgical wound with a reclosure procedure.

[NOTE: The software provides the rate per hospital discharge. However, common practice reports the measure as per 1,000 discharges. The user must multiply the rate obtained from the software by 1,000 to report events per 1,000 hospital discharges.]

NUMERATOR

Discharges, among cases meeting the inclusion and exclusion rules for the denominator, with any-listed ICD-10-PCS code for repair of abdominal wall and with any-listed ICD-10-CM code for disruption of internal surgical wound.

Disruption of internal operation wound diagnosis codes: (ABWALLCD)

T8132XA Disruption of internal operation
 (surgical) wound

Reclosure of postoperative disruption of the abdominal wall procedure codes: (RECLOIP)
